Titan Conveyors™ has the products and experience to provide innovative assembly line conveyor systems, from basic assembly to complex applications. Most often, an assembly line system is a series of standard conveyors with custom features and options to suit the application. Titan Conveyors™ has the advantage of over 40 standard conveyor models to choose from and an almost infinite number of available features and options to customize your system. And when the application requires a completely custom design, Titan's experienced design engineers have a long track record of innovative design from the ground up.

Titan Conveyors™ designed and built assembly line for a major appliance manufacturer featured multi-chain conveyors with padded chains, chain driven live roller conveyors, turntables, pallet up-enders, lift and rotate mechanisms for assembly operations and accumulation conveyors.

AGV system for assembly of marine engines

Table Top Conveyors for assembly of appliances

Tire & Wheel assembly line

Titan Conveyors™ has a fully staffed in-house conveyor engineering and manufacturing operation.

We are willing to customize our standard conveyors and design custom solutions to meet our customers requirements with innovative ideas, but we continually strive to “keep it simple” and keep up a dialogue with our customers.

So that our customers can visualize what they are getting and check dimensions for critical clearances, we generate approval drawings for their scrutiny and review. After approval, we manage and track each job using the newest software capabilities. Then we deliver, on time and on budget.

Automation Integrators and Robotics Integrators throughout North America select Titan as their partner for our ability to innovate and be flexible, provide drawings in both CAD and SolidWorks, and deliver on time with best in class lead times. Integrators often find it helpful for Titan to provide items such as pit plates and cable trays integrated with the conveyor design.
