# LINE SHAFT Individual Belt Driven Roller Conveyor

With Titan's Pathway™ Line Shaft Conveyors and wide variety of accessories you can perform a host of functions including: lift, turn, rolover, transfer, upend, speed up, slow down, brake and accumulate

Pathway™ products can be logically and economically used for simple transportation of products or for integration into total computer directed systems

With Pathway's "quick couple" drive system, you can easily reconfigure your line or lines when you wish to expand or change your plant layout.

**Quiet** The elastomeric belt holds the rollers and the drive bushings firmly under tension. This eliminates the conventional rattling, jiggling and jangling.... fewer moving parts make less noise

**Dwell points or work stations**  
Reverse the twist in the elastomeric belts for dwell points or work stations.

**Skewing**  
Roller axles are spring loaded and can be easily moved one hole on the sidewall for diverting or aligning. Powered skew and herring-bone sections are available.

**Clean** The lineshaft drive system eliminates dirt and grime gathering so the rollers can be clean as the materials they convey.

**Sensible** Each roller, drive bushing and belt operate like a slip clutch... the torque to each roller is adequate to drive the roller, but the slip clutch effect allows each roller to stop.

**Pathway™** Line Shaft is extremely quiet and sensibly safe. Each grooved roller is individually driven through its own individual drive bushing placed on the line shaft. Power to each roller is transmitted by a pre tensioned elastomeric drive belt. This system controls the torque to each roller giving your products the safest possible drive with maximum control.

The proven line shaft concept, coupled with Titan's full commitment to quality and leadership, could well make the **Pathway™** the outstanding conveyor system in your facility.

If you want a clean, quiet, economical versatile and flexible, energy saving conveyor system in your facility contact:
